

NEW WAVE PUSH-TO-TALK (PTT) MOBILE APPLICATION

OVERVIEW

Motorola Solutions is announcing a new WAVE (push-to-talk) PTT mobile application, available for download in the iOS and Android application stores. The following enhancements to the WAVE service are available to users who upgrade to the new application (based on their tier of service).

FEATURES

User Interface

The **Dispatch user interface** has been modified to provide easier access to talkgroup monitoring and active calls.

The **PTT Radio Mode user interface** has been updated to add quick access to favorites, easier channel selection across zones, easier reach to contacts list and zone selection, a clearer layout for talkgroup name, channel, and zone, and the addition of an end call button, and missed call alerts.

Emergency Service

Multiple users allowed in an emergency state on the same talkgroup.

Emergency call steering to individual contact or talkgroup.

External emergency button can be set to toggle (raise/clear) or initiate only (raise).

External emergency button will activate hot-mic and alert dispatchers when pressed during an emergency state.

PTT application plays a distinct error tone when the emergency button is pressed and emergency activation fails.

Authorized users can **remotely initiate and cancel emergencies**.

Time and Distance Based Location Updates

Dispatchers now have the ability to **set location updates** of assigned contacts based on **time passed** (1 - 15 min.) or **distance travelled** (100 - 5,000 m.).
